for regional or national toll coverage
- Emerging 6C transponder technology
- Toll by plate and violations mitigation
- Easy-to-install sticker transponder with
minimal windshield footprint
- HOV lane compatible Horizon Voyager
Flex transponder also available

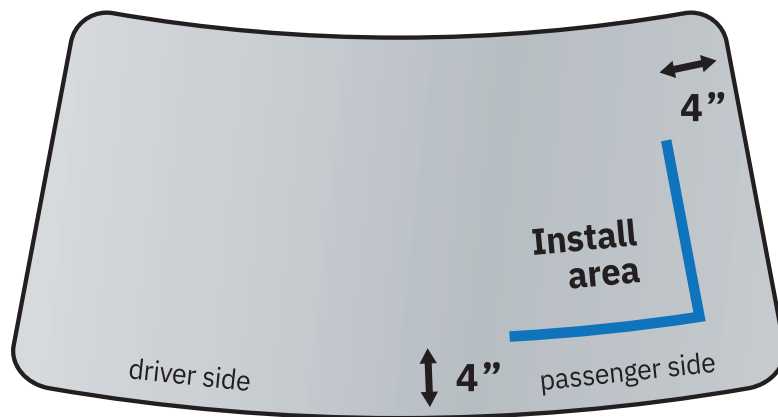

How it Works

The Horizon Voyager transponder is a high-performance Radio Frequency Identification (RFID) device that has been specifically designed to be applied to the interior of a windshield.

Interior view of front windshield

Note: the performance of the transponder will be significantly impacted if it is held in the driver's hand or placed on the dashboard of the vehicle.

Installation

The transponder must be installed a minimum of four inches from the metal frame of the vehicle, as well as four inches from any other toll transponders and eight inches from electronic devices, ex: GPS, radar, cameras. The blue lines in the image above indicate recommended placement locations. Be sure to orient the device horizontally.

Protocol: 6C

Application temperature: 70°F to 100°F (21°C to 38°C) / application not recommended if surface temperature is below 50°F (10°C)

Cure time: 72 hours

Adhesive lifespan: If installed appropriately, adhesive guaranteed for 10 years
